

We Can Help You Reach Your ENVIRONMENTAL GOALS!

DZOLV PRODUCTS Pty Ltd

can provide information, new technology and eco-friendly packaging solutions.

We work closely with our global partners in developing and applying new technologies that provide environmental solutions. Our products are based on technology engineered for biodegradability and compostability using annually renewable resources. PLA (Poly Lactic Acid) technology for single use disposable containers, trays and cups, and PVOH (Poly Vinyl Alcohol) technology for use in dissolving films for bags and sheeting are examples of the technologies now available. As a highly motivated team we actively seek to expand our knowledge base through our global partnership program. We are dedicated to building long-term relationships with customers through quality training and customer support, corporate partnerships and education programs.
